

**D-ECKWEILER**

TUBE SYSTEMS IN STAINLESS STEEL

COMPANY PROFILE

# SYSTEMS IN STAINLESS STEEL

**D**ockweiler has been a partner of industry since 1955 and has developed from a trading company to a leading supplier of tube systems worldwide.

Dockweiler's first stainless steel tube programs, TCC and Ultron are considered today to be products of the highest technical standard of surface quality and purity and are widely specified by the planning companies and end users of the semiconductor industry.

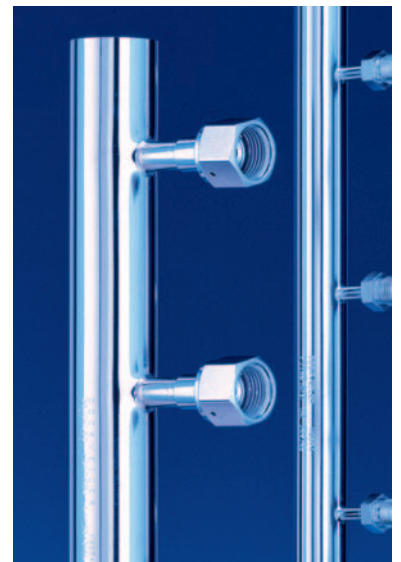

In order to meet the increasing standards of the pharmaceutical industry and the growing demands of biotechnology, Dockweiler then designed their product lines safetron, weldtron and Dockweiler BPE which fast became new points of reference for the market.

During this time Dockweiler set up their own fittings and specials production line. The Dockweiler team of engineers works out optimal solutions with the customer both for installation and prefabrication – always with the objective

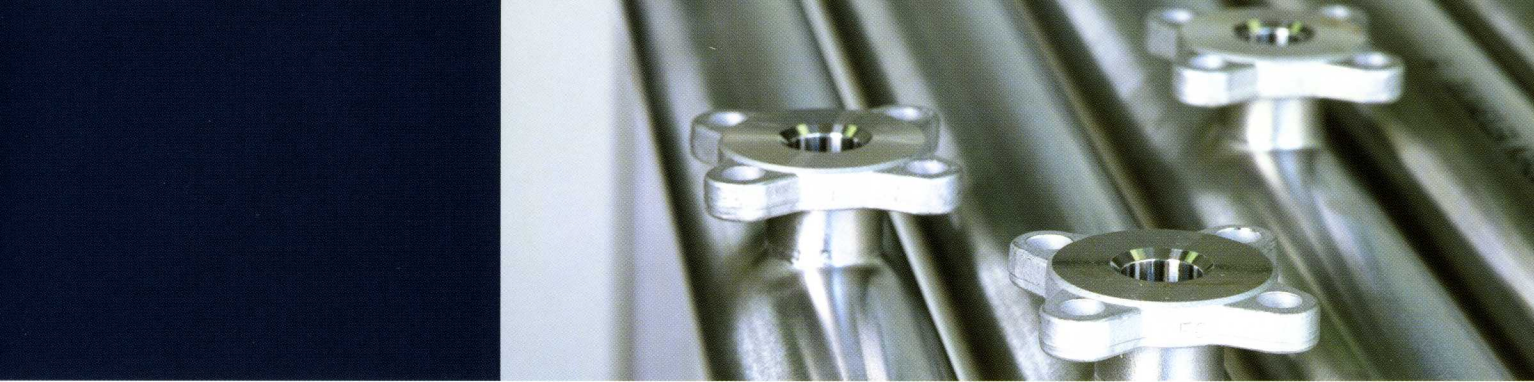

## **better • faster • cheaper**

For the semiconductor industry the prefabrication of manifolds and headers means

- ✓ Better quality
- ✓ Faster installation and dry down times
- ✓ Cheaper total costs

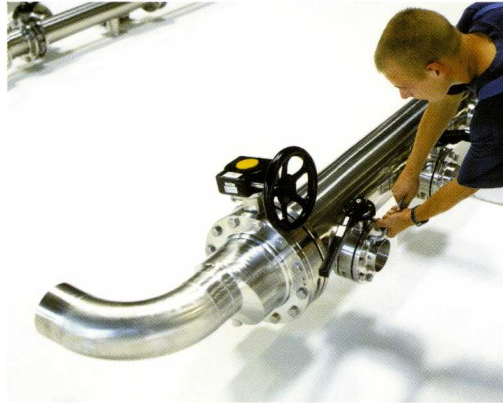

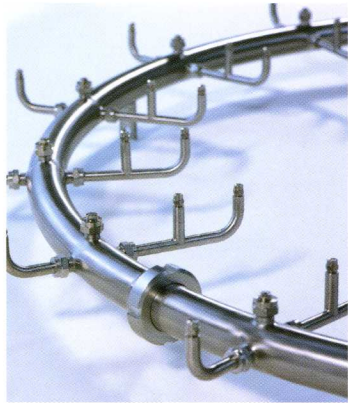

For the pharmaceutical industry and biotechnology prefabrication of whole sections of the installation and of CIP systems means

- ✓ Minimized dead volume
- ✓ Optimal cleanability, sterilizeability and rinseability
- ✓ Cheaper total costs through faster validation
- ✓ Dockweiler manifolds fulfill all demands of the FDA.

## A step ahead of state of the art

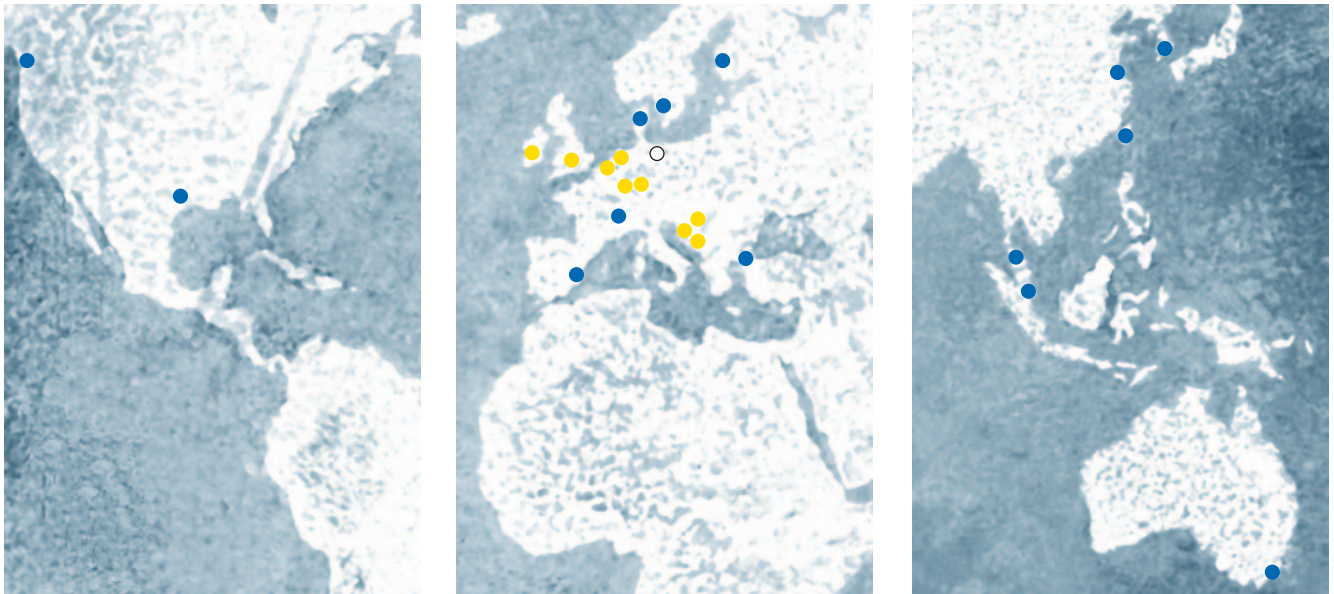

This principle of Dockweiler's work lead to the development of the Dockweiler Bubbler System in close cooperation with current research and utilizing an exchange of know-how with our customers.

Today Dockweiler is a privately owned global corporation with highly qualified teams in sales, engineering and quality assurance who work closely with the global players of the semiconductor, pharmaceutical and automotive industries.

An extensive stock of finished products with more than one million components guarantees short delivery times and means flexibility and efficiency for planner and user.
